

The ECO abrasive blasting deburrer type ROTOR TS 10 is a powerful drum type small abrasive blasting deburrer for the cryogenic burring of elastomers by means of cold embrittling of the burr and admission of abrasive.

- Abrasive

Plastic granulates or steel shot can be used as abrasive.

1. Plastic granulates, diameter 1.0 -3.0 mm

PENTACORN PC, the abrasive made of polycarbonate, with high specific gravity, therefore high kinetic energy for the burring of elastic parts, especially developed for cryogenic blasting up to -190 °C.
